Farm Management System

Introduction

In the Farm Management System (FMS), as a farmer, farm manager, or system administrator, I want to use a centralized Salesforce-based platform to record and manage farm, crop, farmer, and buyer information so that all agricultural data is stored securely and systematically.

Easy Data Entry & Updates

I want to enter and update farm details, crop production records, and buyer transactions easily through a user-friendly interface with proper validation rules to prevent incorrect entries.

Real-time Reports & Interactive Dashboards

I also want the system to generate real-time reports and interactive dashboards so that I can analyze farm productivity, monitor sales, and make informed decisions.

Role-based Access & Secure Data Storage

Additionally, I want role-based access and secure data storage to ensure that sensitive information is protected while enabling smooth collaboration among users.

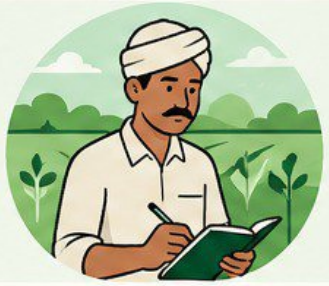

Overall Benefit

This system will help reduce manual paperwork, minimize errors, improve efficiency, and support data-driven farm management.

PROBLEM STATEMENT

FARM MANAGEMENT SYSTEM

Agriculture is the main occupation in India, but most farmers still follow traditional farming methods. They maintain all records like crop details, expenses, labor wages, and sales in notebooks. This leads to many problems.

Main Problems

No Centralized Data

All farm information is scattered and not stored in one place.

Manual Errors

Hand-written calculations cause mistakes in profit and loss.

Inventory Loss

Farmers don't know how much seeds, fertilizers, and pesticides are left in stock.

Labor Management Issue

No proper tracking of daily workers and wages.

No Market Knowledge

Farmers are not aware of current market prices (Mandi Rate) and weather conditions.

Time Consuming

It takes a lot of time to manage records manually.

Because of these issues, farmers face financial loss and low productivity.

FARM MANAGEMENT SYSTEM

IDEA

The idea is to create a single mobile/web app for farmers to manage their entire farm digitally.

Instead of writing in notebooks, farmer can use this app to:

Add Crop Details

Record crop information like sowing date, harvest date, etc.

Track Expenses & Income

Manage your expenses and income with auto profit/loss calculation.

Manage Stock

Keep track of seeds, fertilizer, pesticides and other supplies.

Manage Labors & Daily Wages

Track daily workers and their wages.

Record Sales & Buyer Details

Maintain sales records and buyer information.

Get Weather Forecast & Market Price Alerts

Stay updated with weather forecasts and current market prices.

Main Goal

Make farming easy, organized, and more profitable with technology.

FARM MANAGEMENT SYSTEM - OBJECTIVES

Key objectives to streamline and enhance farm operations through digital management

1. Digitize farm records

Convert paper records to secure digital database

2. Manage crop details

Track crop types, planting dates, and growth stages

3. Track expenses

Monitor costs, purchases, and financial outflows

4. Manage inventory

Oversee seeds, fertilizers, and supply stock levels

5. Manage labor

Schedule workforce, tasks, and payroll management

6. Record sales

Log sales transactions and customer orders

7. Weather forecast

Access real-time weather data and forecasts

8. Generate reports

Create insights and export analytical reports
